Tile after 24 hours

Install vinyl and wood
after 7 days

Commission underfloor heating
systems after 7 days

Rapid Drying Cement for **Internal** and **External** Screeds

Developed to perform in real UK site conditions, ARDEX A 29 produces a Rapid Drying Screed that offers unique application and performance benefits to professional screeding contractors, combining workability, speed and performance.

A reliable and economical 1:7 mix can be tested using the BRE Screed Test after just 24 hours,

and the enhanced workability and extended 90 minute working time, greatly improves the installation process.

Once installed, an ARDEX A 29 Screed is walkable after only 8 hours, can be tiled after 24 hours, and receive vinyl and wood floorcoverings after just 7 days.

ARDEX - The Experts in Fast Track Screeding

Our company's heritage dates back more than 60 years, and as a global manufacturer of Fast Track Building Products, we've remained at the forefront of the UK construction industry. ARDEX products are manufactured to perform in the

most demanding environments, and are ideal for use in real UK site conditions, where they can be used to significantly shorten installation times, making them a cost effective alternative to standard building materials.

THE GET BUSY LIVING! CENTRE
LEICESTERSHIRE

“The **90 minute** working time meant we could mix and apply more screed at once, offering plenty of time for compacting and levelling.”

Contractor: Midlands Floor Screeding

For contractors donating their services on the time and budget sensitive construction of a new rehabilitation centre for young people, the need for a rapid drying screed was paramount.

Contract Director Louis Dewsbury from Midlands Floor Screeding said “ARDEX A 29 was chosen on the Get Busy Living Centre due to its rapid drying properties, which allowed the finishing trades to traffic the floor after only 8 hours, much faster than they could if a traditional sand/cement screed was used. The installation team had only positive things to say about ARDEX A 29, and the client was left impressed with the finished floor.”
