

ARDEX A 70 GYPFLO

Flowable calcium sulphate screed that dries in as little as 14 days

ARDEX A 70 GYPFLO

Quick Drying Flowable Calcium Sulphate Screed

Calcium Sulphate
Screed that dries in
as little as 14 days!

Walkable in as little as 6 hours

Ready to receive floorcoverings
in as little as 14 days

Pre-blended for consistency and
convenience – just add water

Pump or hand apply

Excellent flow properties

Low shrinkage - minimises
cracking and curling

High early and final strength
development (CA-C40-F7)

Can be used with underfloor
heating systems

All the benefits of flowable screed without the wait!

Time is money in construction and few processes can stall progress as much as a slow setting screed. Delayed projects can lead to increased site running costs, disrupted work schedules and may even incur substantial penalty clauses.

A typical anhydrite screed at 50mm will take up to 60 days to dry, and in real

UK site conditions you could be looking at up to 90 days or more of drying time!

Once installed, an ARDEX A 70 GYPFLO screed is walkable after only 6 hours, and is ready to receive floorcoverings after just 14 days.

ARDEX - the experts in fast track screeding

Our company's heritage dates back more than 60 years, and as a global manufacturer of Fast Track Building Products, we've remained at the forefront of the UK construction industry. ARDEX products are manufactured to perform in the most demanding

environments, and are ideal for use in real UK site conditions, where they can be used to significantly shorten installation times, making them a cost effective alternative to standard building materials.
